# Fillflex – the flexible filling system

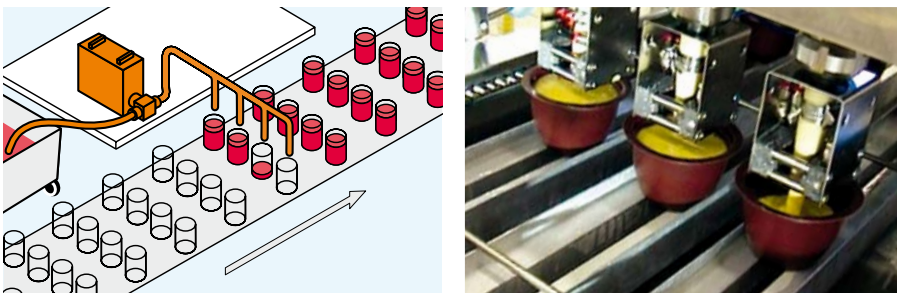

## Semi automatic filling

The easiest way to get started with efficient production. The filling sequence is started with a pedal, for instance, and the containers are manually handled.

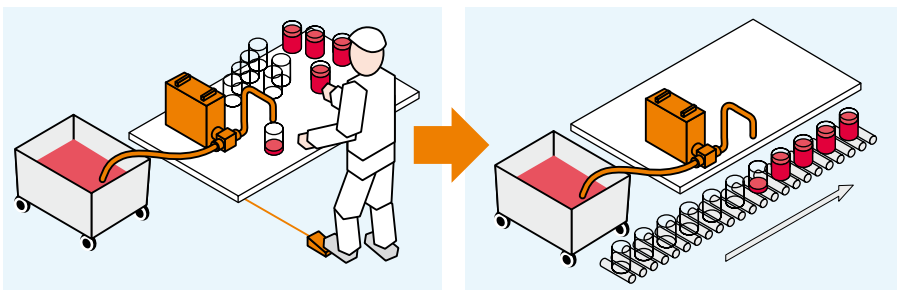

## Fully automatic filling

In a fully automatic filling mode, Fillflex is used as a filling station together with a conveyor band. The Fillflex Compact is prepared for fully automatic operation.

## Sequence filling

Get an even higher production capacity from your filling machine. Fillflex Compact Sequence fills up to four containers in a row, one after another, with one single machine.

## Expand with Fillflex

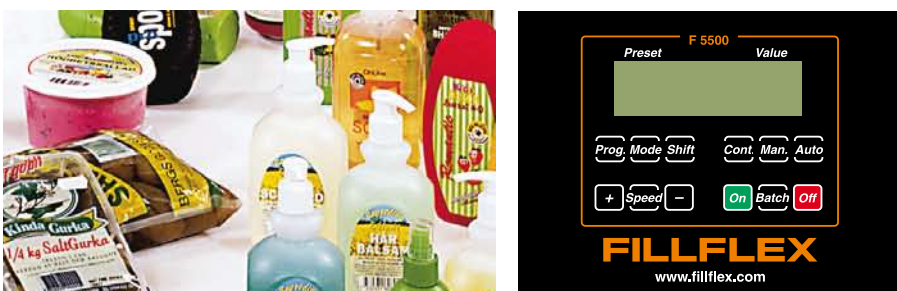

Fillflex is prepared for fully automatic operation, ready to receive external control impulses from a conveyor. This means that you can use the same machine when your operations expand.

## Simple installation

Fillflex Compact features 'plug and play' simplicity:

1. Put in place.
2. Connect outlet pipes and hoses.
3. Connect to an earthed socket.
4. Start!

## Simple to adjust

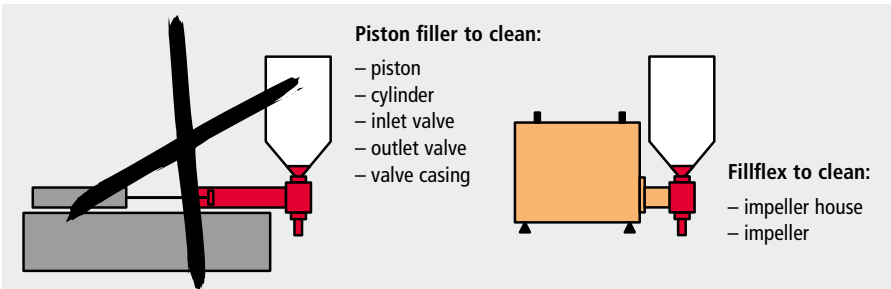

All settings are done at the Fillflex control panel. The operator can easily adjust the filling volume and rate and other settings, even in a comprehensive filling process.

# Fillflex – the flexible filling system

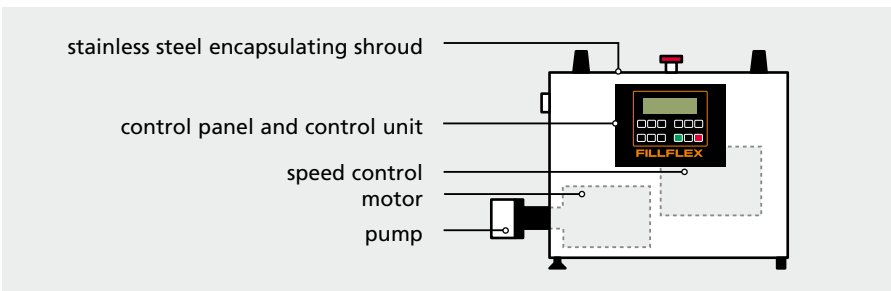

## Wide volume range

Use the same filler for small retail-size bottles as well as large wholesale vats. Fillflex controls the whole filling process, down the last detail.

## Simple to clean

A conventional piston filler has many parts to clean – Fillflex just two. The Fillflex pumps are simple to dismantle and clean. Typically without any tools.

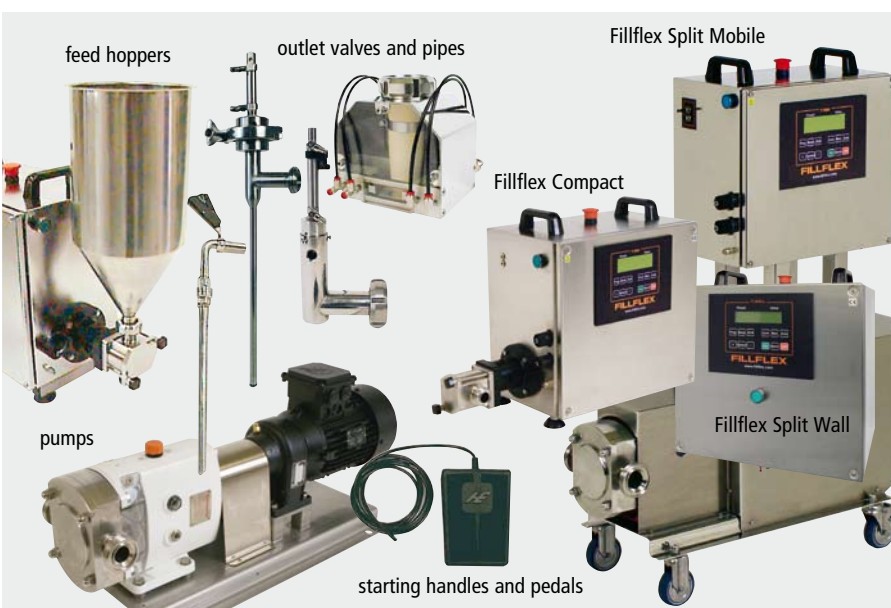

## Simple and robust design

The Fillflex system is based on a simple principle and its own innovative control system – a totally different design from conventional piston fillers.

Alkyd oil	Furniture stain	Marmalade	Pea soup	Soap
Apple sauce	Glue	Mashed potato	Petrol	Solvent
Beer	Grinding paste	Mayonnaise	Pharmaceuticals	Spirit
Cheese sauce	Honey	Mincemeat sauce	Pine oil	Stewed fruit
Cleaning agent	Jam	Mustard	Potato salad	Wine
Degreaser	Jellied veal	Nose drops	Salads	Yoghurt
Detergent	Leather oil	Orange juice	Sauces	
Dressings	Liver paste	Paint	Shampoo	and many,
Ethanol	Lotion	Pâté	Skin cream	many more...

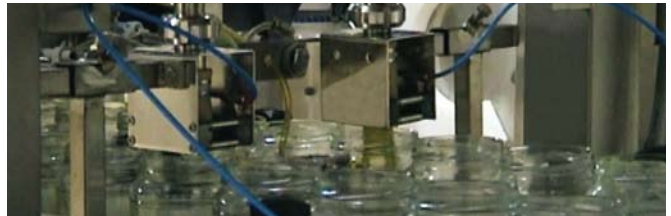

## If it can be pumped, Fillflex can fill it

There is always an ideal Fillflex combination for your product, your packaging and your business.

## The complete system for all kinds of filling and depositing

By combining the various filler models with pumps, valves and accessories, Fillflex can solve virtually any filling problem.
