3. → U →
4. ← U ←

And so on,
at an almost
constant
filling rate.

Fillflex™ Duplex gives you twice the capacity with one single filler

As a matter of fact, Fillflex Duplex enables almost constant filling at highest capacity level of the machine!

Fillflex Duplex has two adjustable compartments, suiting all kinds of containers. Put an empty container in the first compartment and filling starts automatically. Then put a new container in the second compartment. As the first container is filled, the filler automatically switches over to the second and starts filling.

And so on. As long as there is an empty container in one of the compartments,

Fillflex Duplex keeps on filling. No waiting time for change of containers. Meanwhile the operator can unpack empty containers and seal and pack the filled ones.

'Plug and play' installation:

1. Roll up to table.
2. Adjust the height.
3. Connect to earthed socket.
4. Fillflex Duplex is ready for filling!
